

Deploy Application on Cloud

DESCRIPTION

Project objective:

As a developer, deploy your Spring Boot application on Cloud.

Background of the problem statement:

You have been assigned a new task during the sprint planning. You have been asked to deploy your Spring Boot application on the Cloud. You need to create and launch an instance, provide all the required privileges, and run your application.

You must use the following:

- Cloud: AWS

Commands:-

```
sudo yum update -y
```

```
sudo yum install -y httpd
```

```
sudo systemctl start httpd
```

```
sudo chmod 0777/var/www/html
```

```
sudo apt update && sudo apt upgrade -y
```

```
sudo apt install default-jre
```

```
sudo apt install default-jdk
```

```
java-version
```

```
wget https://anand-apps.s3.ap-south-1.amazonaws.com/springboot-aws.war
```

```
ls
```

```
java-jar springboot-aws.war.2
```
